EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows: claim 17, line 2, "second pumping" has been changed to ---second pumping node---.

2. The following is an examiner's statement of reasons for allowance: the prior art does not teach or disclose, in combination with the remaining features of the claims, a circuit arrangement for starting and operating discharge lamps, wherein the output of a controller being coupled to an inverter in such a way that the actuating signal influences the inverter frequency, a first controller input, into which there is fed a first electrical variable, which corresponds to a first operating variable, a second controller input, into which there is fed via a threshold switch, a second electrical variable, which corresponds to a second operating variable, which is a measure of the reactive energy that resonates in the resonant circuit, the value of the second electrical variable bringing about a greater value of the inverter frequency if the threshold value of the threshold switch is exceeded.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
